

AIA PHILAM LIFE ELITE ADVENTUROUS FUND

April 28, 2023

Fund Description

The AIA Philam Life Elite Adventurous Fund seeks long-term total return (combination of capital growth and income) with higher risk by investing in a portfolio of mostly equities and a small proportion of fixed income securities. The ILP Sub-Fund's expected average direct and indirect exposure to equities will be approximately 90% over the long-term, however this exposure may vary from time to time. The other 10% will be invested in fixed income or money market instruments.

Opinions: Any opinions expressed in this document may be subject to change without notice. We are not soliciting or recommending any action based on this material.

Risk Warning: Past performance is not indicative of future results. Our investment management services relate to a variety of investments, each of which can fluctuate in value. The value of portfolios we manage may fall as well as rise, and the investor may not get back the full amount originally invested. The investment risk vary between different types of instruments. For example, for portfolios denominated in foreign currencies, changes in the rate of exchange may cause the value of investments, and consequently the value of the portfolio, to increase or decrease. In the case of a higher portfolio volatility, the realized loss upon redemption may be high, as the investment's value may decline substantially. In making an investment decision, prospective investors must rely on their own examination of the merits and risks involved. Commentary:

Market Review

Global equities traded higher in April as markets reacted positively to the swift responses taken by central banks to provide liquidity and stabilise markets to avoid risk of contagion from the recent banking crisis. The increased in lending standards amongst banks, coupled with ongoing jitters in the banking industry, may put a cap on the hawkish attitude of central banks to slow down the pace of their interest rate hikes and take a more balanced approach in the ir monetary policies in the months ahead.

The recent acquisition of First Republic Bank (FRC) by JPMorgan Chase & Co (JPM) has also given some respite to regional banks and won praises by regulators and the Treasury Department who used the opportunity to reassure consumers and markets that the US financial system is on solid footing and remains sound.

As at the midpoint of the Q1 2023 US corporate earnings season, majority of the companies that have reported their earnings have beaten analyst expectations with positive earnings surprises reported by companies in multiple sectors led by Information Technology (IT), Consumer Discretionary, Energy, Industrials and Communication Services. The MSCI World Index gained 1.75% while MSCI Emerging Markets Index lost -1.13% for the month of April.

In Fixed Income, while markets have calmed down slightly after wild swings in March following the collapse of three US banks, there are plenty of uncertainties that will keep volatility abnormally high in the quarters ahead. This includes the sticky inflation, lingering market stress linked to the Banking sector as well as the risk of the US hitting its debt ceiling. The Bloomberg Barclays Global Aggregate Corporate Total Return index gained 1.18% for the month.

Portfolio Review

Elite Adventurous Fund:

- The portfolio gained 2.57% for the month, underperforming its benchmark by 1.03%.
- With the exception of AIA Global Quality Growth Fund and AIA Asia ex Japan Equity Fund, all underlying funds delivered positive absolute performance in line with markets.
- In terms of relative performance, all underlying funds underperformed the respective equity and bond components of the benchmark.

Outlook

It is increasingly likely that the lending conditions will be tightened further in coming months because of the routs amongst US regional banks. Coupled with excess inventory build ups adding pressure to corporate profitability, it raises the odds of a recession before the end of the year in Developed Market economies. Volatility is likely to remain elevated across asset classes due to a combination of risk factors.

The Elite portfolios continue to place a tactical exposure to Asia Ex-Japan equities as its undemanding valuation offers a good entry point and China's reopening is starting to reflect in activity indicators. We remain underweight equities (with a preference towards Asia Ex-Japan equities) while maintaining the view that the Fed will not look to cut interest rates this year even as peak Fed Fund Rates (FFR) nears. We had turned tactically neutral on bonds after the fall in yields and heightened rates volatility with Silicon Valley Bank's (SVB) failure.
